

Programming Assignment

In this assignment you will create a program that allows a user to do the following:

- 1) Create a bank account by supplying a user id and password. Use static id or pass. (If credentials are store in database is adding extra points).
- 2) Login using their id and password.
- 3) Quit the program.

Now if login was successful the user will be able to do the following:

- 1) Withdraw money.
- 2) Deposit money.
- 3) Request balance.
- 4) Quit the program.
- 5) If login was not successful (for example the id or password did not match) then the user will be taken back to the introduction menu.
For ex- like Welcome to Banking system

Note:

- ***Backend Language Independent(***
- ***Frontend please use react.js or vue.Js or next.js***
